E.S.R.Labs AG

With great enthusiasm I am writing this letter of recommendation for Jim Eckerlein to outline his accomplishments during a practical training he did for ESR Labs AG since September 2015.

I had the distinct pleasure of working with Jim on a variety of following software development projects during the last months:

- development of Arduino Software for capturing CAN traces
- script execution on target

As a start-up company that depends on a sophisticated embedded software-based technology, Jim had lasting impact to the project he worked for. Jim developed a software that does operate a CAN shield for the arduino. He came up with an effective solution for us and convinced with his skills as well as strong communication and inter-personal abilities.

When Jim joined us, he already had only experience in C development. He immediately understood how to use this former experience for the tasks he was confronted with and could quickly exceed our expectations by completing new and challenging projects at a professional level.

His professionalism is a well-balanced blend of competence, experience, and education. Jim´s natural analytical insight, problem-solving skills and acquired technical know-how give him a great business sense, which he proved on a variety of topics. He has an enthusiastic, energetic and tolerant character and is an asset to the team that he works with.

I am convinced that Jim will greatly contribute to any business. I wholeheartedly recommend him and wish him the very best in all future endeavors.

Sincerely,

Oliver Müller
